

Make a Logo Reveal Like This:

Building Background Knowledge:

Follow the tutorials:

1. [Get to Know After Effects](#) (17 min)
2. [Work with compositions](#) (26 min)

Then, search for assets for a custom logo reveal with your own artwork, including your original vector logo.

If you don't have a logo you are happy with right now, you can practice on the BSU logo (attached). Also, if necessary, you may use stock image and footage in your backgrounds as long as they are marked as allowing commercial usage for free. You can find some on these or other sites:

Here are my top three for free stock footage:

1. [Pixabay](#)
2. [Pexels](#)
3. [Unsplash](#)

A little info about each site, and some links to others:

[Stock Photo Sites](#)

[Stock Video Sites](#)

Design Challenge:

Watch the following tutorials, follow along with the exercises, and then complete and upload your own logo reveal with one of the 3D options from the lessons from #5 (preferably the fly through):

1. [Creating and Animating Text](#) (18 min)
2. [Creating Custom Transitions](#) (14 min)
3. [Work with 3D](#) (23 min)

Make sure you have the following elements to your logo reveal:

1. Logo with some kind of 3D effect or animation that changes through the timeline
2. Text with some kind of effect or animation that changes through the timeline
3. At least one opacity transition
4. At least one custom transition

Render and Upload

First, [install Media Encoder](#). Here is the proper way to export your video for assignment submission in the proper .MP4 format as shown below:

If you need to package your work for collaboration or personally working between different computers, use the File> Dependencies> Collect Files method below:
