

DIGITAL CORPS

Setting up a Project Guide

Every project first starts off by getting an assignment. This guide will walk you through the first steps of how to organize a project with Digital Corps. Having set steps makes it easier for file organization and so that a project is accessible to everyone.

ASSIGNMENT

Job requests come in through the Digital Corps website form. A student worker will keep the shared “OFFICIAL Job Request” form up to date as jobs come in. During our weekly meetings, we will go over the current and incoming jobs. Unless a specific student worker is requested, jobs will be given out or signed up for on the Excel spreadsheet. In order to find the Excel form, you will need to go through the “General” folder and the job request form will be labeled with the current school year.

The jobs are input from a series of questions which are listed at the top of the spreadsheet. There will be information needed for a project listed in this form from the title, dimensions, and a resource link. Besides getting used to navigating Excel if you are unfamiliar, you will want to take note of the jobs as they come in and the job status located at the end of each line. You will need to update the status as you work on a project.

File Organization Guide

WORKING FILE SET UP

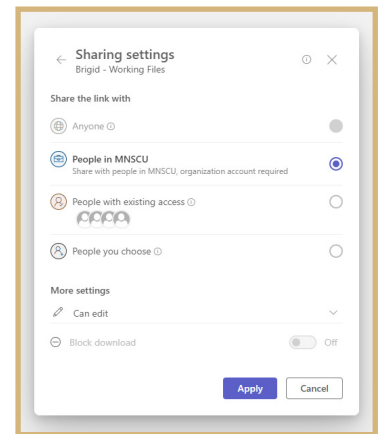

Once you have a job, you will need to set up a space for your project files while you work.

Go to the “General” folder and open “Project Files.” You will have your own folder with your name followed by “Working Files.” Create a new folder with the name of the project which can be found in the job request sheet. This will house all of the files used for the project. Keeping them in one place makes them easy to find and makes them available to other student workers.

Once it's created, select the folder and click “Share” in the top toolbar. Click the gear symbol in the top right corner of the pop-up and change to “People in MNSCU” and make sure they “Can edit” from the “More settings” option below. Select “Apply” and click “Copy Link.”

Navigate back to the job request spreadsheet and find the project you just created a folder for. Scroll to the end of the line and input “In Progress” under “Status.” Right click on the cell and create a “Hyper link” to the folder you just created. Now you can click on that cell and get directed right to that projects files.

NEXT STEPS

Now that the file format is set up, you will need to start the project. There will be a resource link provided by the client and will be listed with their job submission on the job request spreadsheet. Inside, there should be content that you will need in order to complete the project.

Set up a time to meet with the client by using their email listed in the spreadsheet. Create a realistic timeline for yourself and set expectations for the client on what the final project will look like and when it will be completed.
